An Engagement Quality Control Review (EQCR) is an important component of an audit firm's overall audit quality process. Compiled by staff of the Transnational Auditors Committee (the executive arm of the Forum of Firms), this paper highlights the more judgmental elements relating to an EQCR to help practitioners evaluate and enhance their own processes for conducting such reviews.

Engagement Quality Control Reviews: Practical

Statistical process control (SPC) is a method of quality control which employs statistical methods to monitor and control a process. This helps to ensure that the process operates efficiently, producing more specification-conforming products with less waste (rework or scrap). SPC can be applied to any process where the "conforming product" (product meeting specifications) output can be measured.

Statistical process control (SPC) is the use of statistical methods to assess the stability of a process and the quality of its outputs. For example, consider a bottling plant. The entire system of production that produces filled bottles is termed a process. Suppose the weight of liquid content added to a bottle is critical for cost control and customer satisfaction.
