Definitions. A function $f(x)$ is called a rational function if and only if it can be written in the form $f(x) = \frac{p(x)}{q(x)}$ where $p(x)$ and $q(x)$ are polynomial functions of x and $q(x)$ is not the zero function. The domain of f is the set of all values of x for which the denominator $q(x)$ is not zero. However, if $p(x)$ and $q(x)$ have a non-constant polynomial greatest common divisor, then setting $p(x) = p_1(x) \cdot d(x)$ and $q(x) = d(x) \cdot q_1(x)$ produces a rational function
