A repeating or recurring decimal is decimal representation of a number whose digits are periodic (repeating its values at regular intervals) and the infinitely repeated portion is not zero. It can be shown that a number is rational if and only if its decimal representation is repeating or terminating (i.e. all except finitely many digits are zero). For example, the decimal representation of $1 \dots$

Just like the human genome represents the nucleic acid sequence (pictured in Figure 1a) that makes up the DNA of a human being, we use the term polymer genome to (uniquely) identify the basic chemical build-up of a polymer. The polymer genome could be expressed in terms of the repeat unit (such as $[\text{CH}_2 - \text{CH}_2]_n$ - for polyethylene (PE)), the chemical blocks (such as $-\text{CH}_2-$ for PE) or ...

This module implements pseudo-random number generators for various distributions. For integers, there is uniform selection from a range. For sequences, there is uniform selection of a random element, a function to generate a random permutation of a list in-place, and a function for random sampling without replacement.
