Carboplatin/Etoposide Regimens. A number of studies have been conducted to evaluate the combination of carboplatin and etoposide in the treatment of SCLC in previously untreated patients (Table 1 [8-15]). Overall response rates range from 73% to 93% of patients with LD SCLC and 50% to 85% of those with ED.

ABSTRACT. The use of PET/CT imaging in the work-up and management of patients with lung cancer has greatly increased in recent decades. The ability to combine functional and anatomical information has equipped PET/CT to look into various aspects of lung cancer, allowing more precise disease staging and providing useful data during the characterization of indeterminate pulmonary nodules.
