LS-DYNA is an advanced general-purpose multiphysics simulation software package developed by the Livermore Software Technology Corporation (LSTC). While the package continues to contain more and more possibilities for the calculation of many complex, real world problems, its origins and core-competency lie in highly nonlinear transient dynamic finite element analysis (FEA) using explicit time ...

NASTRAN is a finite element analysis (FEA) program that was originally developed for NASA in the late 1960s under United States government funding for the aerospace industry. The MacNeal-Schwendler Corporation (MSC) was one of the principal and original developers of the publicly available NASTRAN code. NASTRAN source code is integrated in a number of different software packages, which are ...

On the other hand, in a chain CVT system, the plates and rocker pins, as depicted in Fig. 2b, transmit tractive power from the driver pulley to the driven pulley. Unlike a belt CVT, the contact forces between the chain and the pulleys are discretely distributed in a chain CVT drive.

Preface. This introduction to R is derived from an original set of notes describing the S and S-PLUS environments written in 1990â€“2 by Bill Venables and David M. Smith when at the University of Adelaide. We have made a number of small changes to reflect differences between the R and S programs, and expanded some of the material.
